Dengue Virus

Dengue is a real virus, which is transmitted by the bite of an Aedes mosquito infected with any one of the four dengue viruses.

It is prevalent in the tropics (e.g. Brazil, Indonesia, India) and is usually non-fatal but severe. It has no known cure.

The disease manifests as a fever with headaches, rashes, and muscle and joint pains.

The World Health Organization estimates that there are 50 million cases of dengue infection worldwide annually.

The disease is endemic in more than 100 countries and on the rise due to climate change.

Assembly Instructions:

1. Cut out shape along outside edge.
2. Pre-crease all dashed black lines with a ruler and a blunt-edged tool (i.e. a bone tool or pen cap).
3. Fold all dashed black lines away from you (i.e. mountain fold).
4. Spread a thin layer of glue on a folded tab.
5. Place tab under corresponding side and press together until glue dries.
6. Repeat until assembled.
